Topic

Countries often say one thing and do another, making their true intentions hard to interpret. Analysing these contradictions, especially across previous voting patterns, official stances, and socioeconomic factors, is a complex and time-consuming task when drafting new resolutions. This system simplifies it all by bringing these diverse datasets together, offering instant, context-aware insights in one place, saving time and improving decision-making.

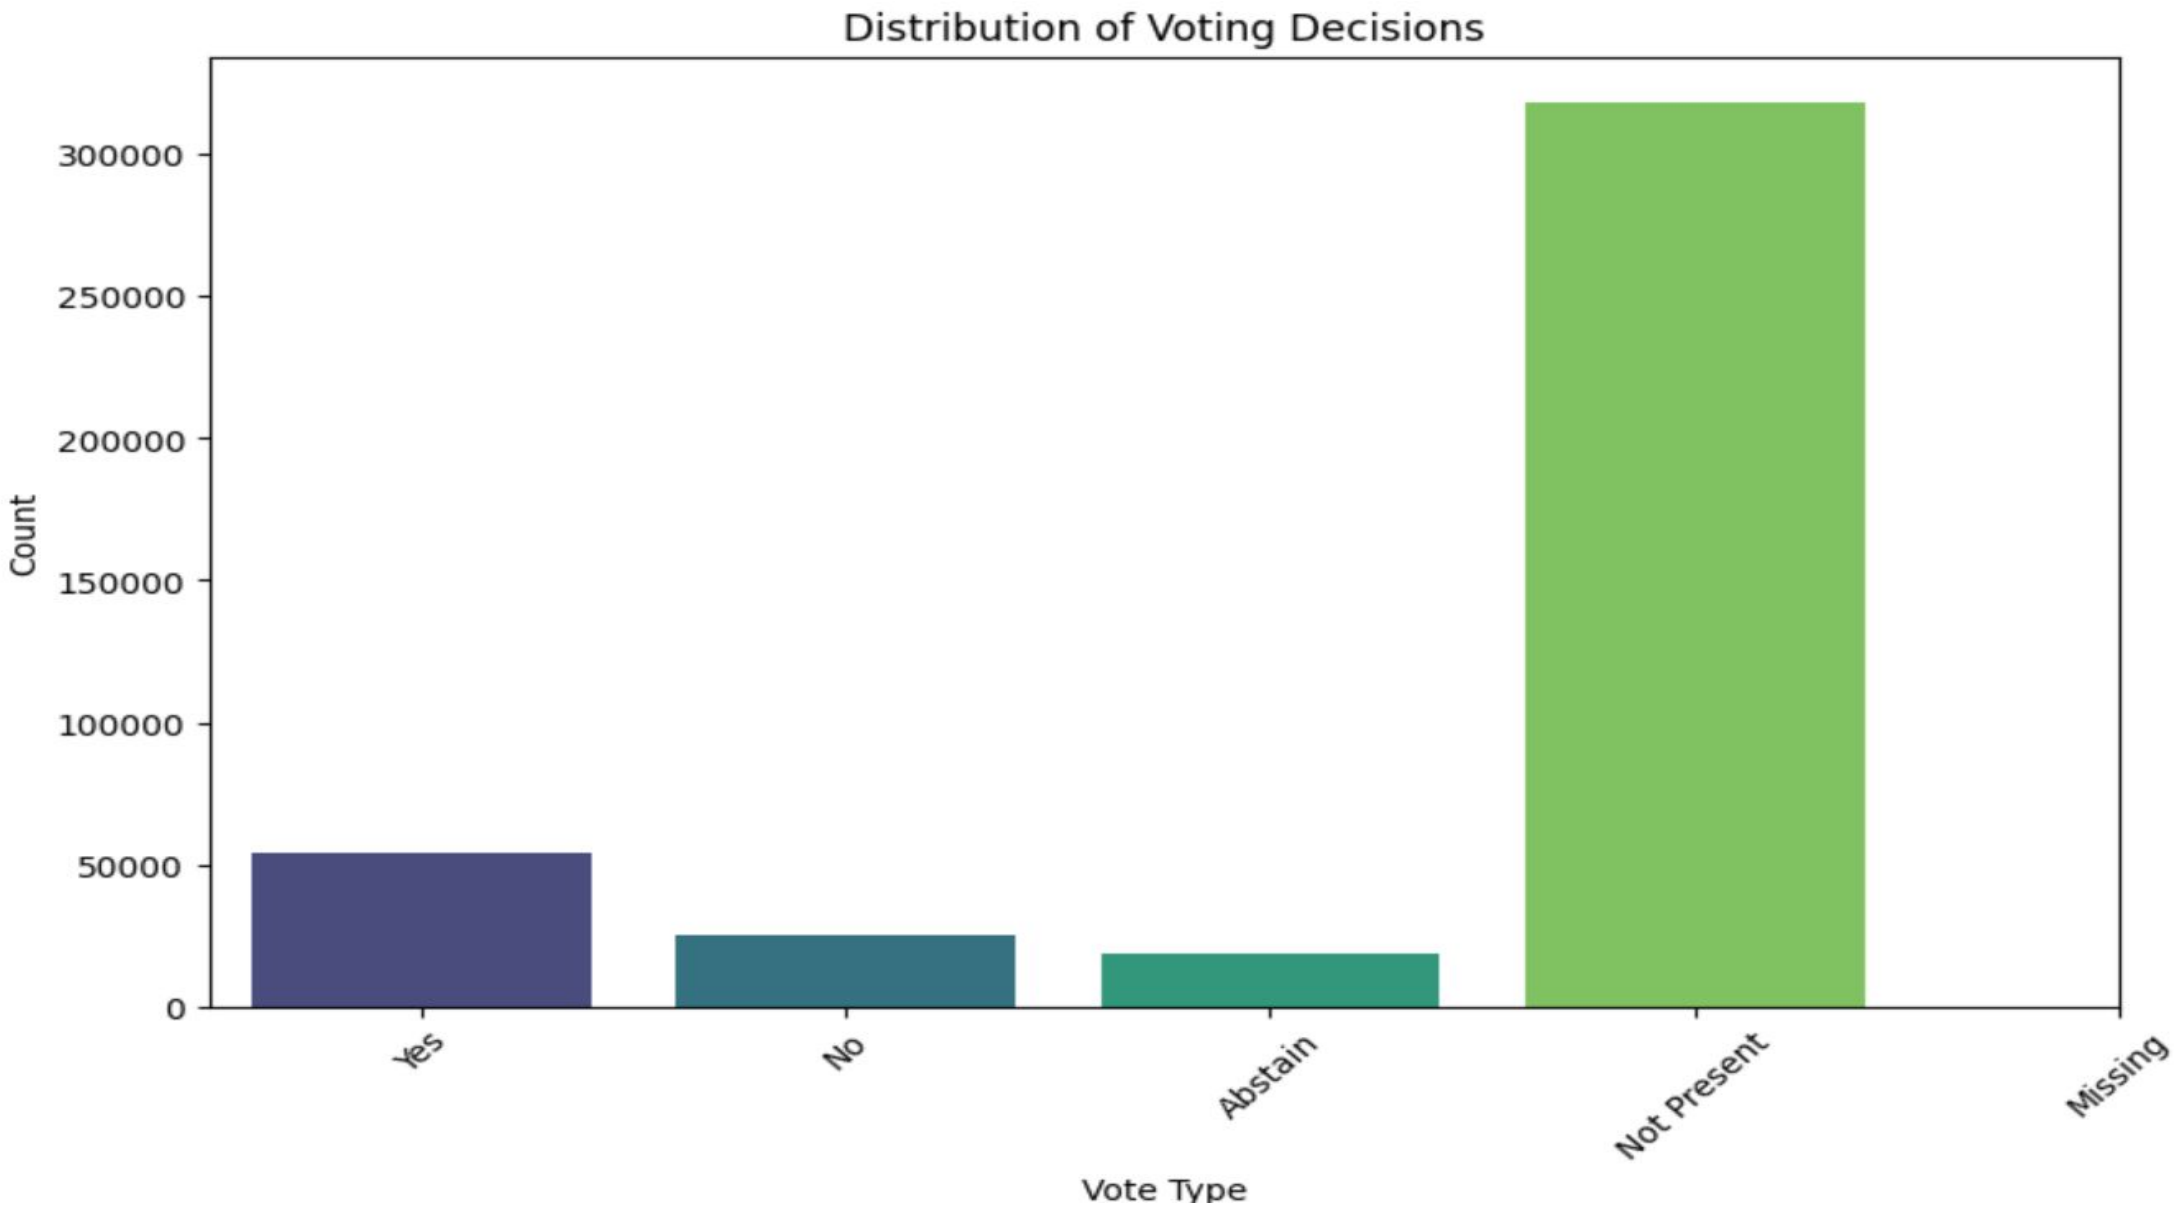

Uniqueness

This project is unique because it bridges the gap between data complexity and actionable insights in global diplomacy. By combining UN resolutions, voting patterns, and socioeconomic data into a single advisory system, it reveals hidden patterns and contradictions in countries' behaviour. The integration of RAG and LLaMA makes it a cutting-edge tool, transforming tedious analysis into a streamlined and interactive experience.

Dataset

We use three datasets: UN resolutions sourced directly from the official UN website, ensuring authenticity and accuracy; socioeconomic data and UN voting data obtained from Kaggle.

UN resolutions include text and metadata, socioeconomic data encompasses indicators like GDP, population, and development indices, while voting data includes patterns, and country stances on various issues.

Results and Conclusion

Question:Assess the diplomatic considerations that guide Russia's decisions regarding sanctions on states with which it has historical or economic ties?

```
Question: Assess the diplomatic considerations that guide Russia's decisions regarding sanctions on states with which it has historical or economic ties?

Provide a thorough analysis.

> Finished chain.

> Finished chain.

Answer: Based on the provided UN resolutions, it is clear that Russia's decisions regarding sanctions on states with which it has historical or economic ties are guided by a complex

1. **Historical ties**: Russia's historical ties with certain states, particularly those in the former Soviet Union, play a significant role in shaping its stance on sanctions. For

2. **Economic interests**: Russia's economic interests also influence its decisions regarding sanctions. For example, Russia's significant trade relationships with countries like Ch

3. **Veto power**: As a permanent member of the UN Security Council, Russia wields significant veto power, which allows it to block sanctions resolutions that it deems unfavorable t

4. **Regional dynamics**: Russia's decisions regarding sanctions are also influenced by regional dynamics. For example, Russia's close relationship with Belarus, a country that has

5. **Diplomatic leverage**: Russia's decisions regarding sanctions can also be influenced by diplomatic leverage. For example, Russia may use its veto power to block sanctions that

6. **International law**: Russia's decisions regarding sanctions are also guided by international law. For example, Russia may be more likely to support sanctions that are deemed la

7. **China's influence**: China's growing influence in international affairs may also play a role in shaping Russia's decisions regarding sanctions. For example, China's close relat

8. **UN Charter**: Russia's decisions regarding sanctions are also guided by the UN Charter, which emphasizes the importance of maintaining international peace and security. Russia

In conclusion, Russia's decisions regarding sanctions on states with which it has historical or economic ties are guided by a complex set of diplomatic considerations, including his

Results and Conclusion

The system successfully integrates UN resolutions, socioeconomic data, and voting patterns, providing accurate, context-aware answers to queries. It effectively identifies patterns, contradictions, and correlations, making the analysis of complex global issues streamlined and efficient.

The system proves to be a powerful tool, delivering precise answers to any query based on the context, saving time, and offering actionable insights.

Done vs Remaining to be done ?

No	Description	Done or To be done
1	Web Scraping and preprocessing of datasets	done
2	RAG and LLaMA model training	done
3	Context verification	done
4	Testing with queries	Done
5		
6		
7		

Quantity and quality of work

no	Code functionality	% Complete	Runs without problem (Y/N)	If there are minor issues, indicate
1	Scraping and Preprocessing code	100	Y	
2	RAG def and LLaMA model training	100	Y	
3	Context verification	100	Y	
4	Testing with queries	100	Y	

Top few learnings

Serial No	Top learning in this project
1	The ability to tune our own context aware LLM
2	UN resolutions, and voting types and patterns
3	Geopolitical stances of various nations
4	Natural Language Processing (NLP)
5	Predictive modelling
